

Rosetti Marino Group increases collaboration through Nintex

No-code solution eases transition from Lotus Notes to SharePoint with automated workflows.

Business situation

While migrating from Lotus Notes to SharePoint, Rosetti Marino realized workflows would smooth the process and allow them to automate project site permissions and document management.

Solution

After the project team list is created in Word, that document is used to automatically generate the project folder and permissions for project sites. Nintex Workflow also manages the document approval process, as well as automatic archiving.

Benefits

No-code solution saves 50% of developers' time

Increased collaboration with partners

Challenging shift from Lotus Notes to SharePoint made easy with Nintex

Finding a replacement and upgrade to Lotus Notes

“In my opinion, Nintex is easy to use and quick to be learned. With Nintex, you can complete projects in a few days.”

— **Alessandro Mucciarella**, Head of IT Development and Change Project Leader, Rosetti Marino Group

Providing construction and engineering services, both onshore and off, for gas and oil, and ship-building companies around the globe means coordinating large-scale, complex projects. Although Lotus Notes worked well in the early years of computer databases, Rosetti recently upgraded to SharePoint and quickly realized it could save time and money by automating strategic processes such as setup and permissions of project sites, handling document management, and archiving. Rosetti turned to technology solutions partner GreenTeam for advice.

Nintex saves half of the developer time

Because Nintex doesn't require a developer to write code, Alessandro Mucciarella, Head of IT Development at Rosetti Marino Group, says his developer is 50 percent more efficient, freeing up time for other projects. Although Rosetti Marino Group maintains only a 10-person IT team, the group realized that Nintex allows them to complete projects themselves without having to turn to other partners or third-party software, providing even more savings.

From errors to ease

At the start of each project, one team member was appointed the onerous task of creating project sites and assigning permissions, a process that could take a great deal of time and lead to inadvertent errors.

Now when a project starts, a single Word document with a list of all persons involved in the project is pushed into Nintex. In minutes, Nintex Workflow automatically sets up the SharePoint sites with the correct permissions. This happens so seamlessly that users don't even realize they're using Nintex.

Finding a replacement and upgrade to Lotus Notes

Processes for construction and engineering work require signoff at different stages. Handling sign-offs via paper, email and phone calls means documents sit on desks or in email inboxes for days, if not weeks, waiting for approval.

Nintex's LazyApproval feature makes responding easy for users, taking the process from days or weeks to minutes.

Once someone approves the construction or engineering work, another Nintex Workflow transfers the approval document to a readable SharePoint library. Prior to switching to Nintex, Rosetti Marino Group stored documents in a Lotus Notes database. Mucciarella says migrating the forms from Lotus Notes to SharePoint proved "quite easy" with Nintex.

Looking forward, Rosetti Marino Group plans to develop an employee onboarding system that would automate new employees' Active Directory set-up. Mucciarella is also interested in exploring automatic integrations with SAP data, specifically with the goal of increasing efficiency even more.

About Nintex

Nintex is the global standard for process management and automation. Today more than 8,000 public and private sector clients across 90 countries turn to the Nintex Platform to accelerate progress on their digital transformation journeys by quickly and easily managing, automating and optimizing business processes. Learn more by visiting www.nintex.com and experience how Nintex and its global partner network are shaping the future of Intelligent Process Automation (IPA).
